

Embracing the AI Future:

- Identifying Responsible Guard Rails that can be put in place.
- Define Credible Impact studies that will be done to evaluate/assess (and possibly incentivize)
    - Data Center Creation: (These are not going away)
        - Impact on Community – Flesh out Key Positives vs. Negatives
            - Environmental Impact:
                - Power consumption/needs
                - Creative ways to address
                - Water Impact
                - Reasonable forecast on need/usage
                - Waste Water Handling
            - Economy -Job creation/sustainment
                - Near term
                - Longer term projections

- What responsible regulations should be?

- Where should that regulation be owned?

    - Is this only a Federal/State regulator concern?
    - Assemble a responsible Advisory Committee including:
        - Cross-sector team made up of:
            - Private Sector SME's from Power, MFG, Technology, Fin Services
- Based on evaluation of the above:
    - Establish a reasonable "Scoring" process
    - Is there a need for a resulting "Certification" or "Stamp of Approval" process?
